Class Schedule			
Day 1:		Day 2:	
a)	Installation and set-up of R and R	a)	Importing Data
Studio	•	b)	Exporting Data
b)	How to install R packages	c)	Variable labels/Value labels
c)	Basic computation in R	d)	Getting information from a dataset
d)	R variables	e)	Missing data
e)	R basic data types	f)	Date values
f)	Useful functions		
Day 3:		Day 4:	
a)	Variable and Data management	a)	Statistical probability function
b)	Sorting data	b)	User-written function
c)	Merging data/Aggregating data	c)	Control Structures
d)	Sub-setting data	d)	Data type conversion
e)	Random samples	e)	Basic Statistics
f)	Operators and Built-in functions	f)	Descriptive Statistics
Day 5:		Day 6:	
a)	Frequencies, Crosstabs, and Chi-square	a)	Correlations and Visualizing
test		Correlations	
b)	Hypothesis	b)	Nonparametric tests
c)	ANOVA	c)	Regression analysis
d)	T-tests/ Tests of independence	d)	Fitting the model
e)	Measures of association	e)	Diagnostic plots
f)	Visualizing results	f)	Comparing models
Day 7:		Day 8:	
a)	Variable selection	a)	Introduction to ggplot2
b)	Multiple comparisons	b)	Beyond Linear/Logistic regression
c)	Creating a graph		
d)	Visualizing results		
e)	Regression diagnostics		
f)	Homogeneity of variances		
Module 2 (with Project)			

Module 2 (with Project):

- a) Project Plan
- Each group will supervise to complete their project
 The trainers will discuss in meeting weekly once with each group
- The trainers will available for short discussion any time in this period Research article write-up and publication d)
